Home / Publications / Magazines

IEEE Communications Magazine provides timely information on all aspects of (electrical/electronic) communications. The magazine covers services (telecommunications, multimedia, Internet and digital), network (including its softwarization, as well as underlying infrastructure) and device technology, support systems, transversal topics like artificial intelligence applied to telecommunications, market trends, strategy and regulatory issues. Articles are tutorial in nature and written in a style comprehensible to readers outside the specialty of the article. These articles are complemented with non-indexed columns.
