Transactions On Computational Social Systems

Scope

IEEE Transactions on Computational Social Systems focuses on such topics as modeling, simulation, analysis and understanding of social systems from the quantitative and/or computational perspective. “Systems” include man-man, man-machine and machine-machine organizations and adversarial situations as well as social media structures and their dynamics. More specifically, the proposed transactions publishes articles on modeling the dynamics of social systems, methodologies for incorporating and representing socio-cultural and behavioral aspects in computational modeling, analysis of social system behavior and structure, and paradigms for social systems modeling and simulation. The journal also features articles on social network dynamics, social intelligence and cognition, social systems design and architectures, socio-cultural modeling and representation, and computational behavior modeling, and their applications.

Posting Preprints to Non-IEEE Servers
Authors should disclose postings on approved preprint services when submitting papers to SMCs Journals.

Consult relevant sections posted [here](#).

The following statement must be included on the initial screen of the preprint site:

- “*This work has been submitted to the IEEE for possible publication. Copyright may be transferred without notice, after which this version may no longer be accessible.*”

Peer Review

The articles in this journal are peer reviewed in accordance with the requirements set forth in the [IEEE Publication Services and Products Board Operations Manual](#). Each published article was reviewed by a minimum of two independent reviewers using a single-anonymous peer review process, where the identities of the reviewers are not known to the authors, but the reviewers know the identities of the authors. Articles will be screened for plagiarism before acceptance.

THE SMC SOCIETY MISSION

The mission of the Systems, Man, and Cybernetics Society is to serve the interests of its members and the community at large by promoting the theory, practice, and interdisciplinary aspects of **systems science and engineering, human-machine systems, and cybernetics**. It is accomplished through conferences, publications, and other activities that contribute to the professional needs of its members.
